HOW TO OPEN

How to open MSEB

Three steps to the sound console — watch the live spectrum as you tune.

1

Play screen -> top-right effects menu -> MSEB

Find the toggle marked 'B' and turn it on to enter the console.

2

Realtime spectrum on top

Push a slider and 'see' how the sound changes — what you see is what you hear.

3

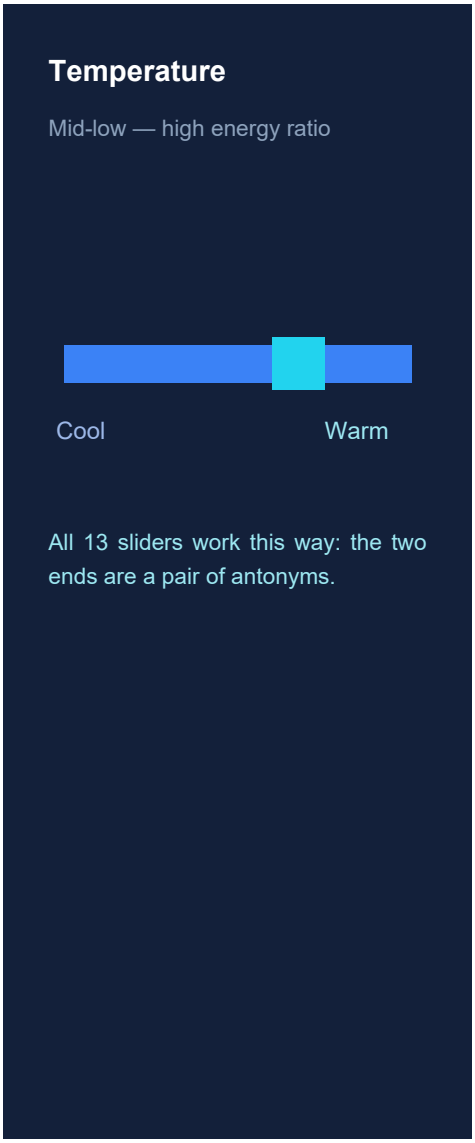

Export / import with backup

Export a JSON in Settings; restore all tuning on a new phone in one tap.

KEY IDEA

It tunes perceptual dimensions

A traditional EQ speaks engineering ('+3dB at 100Hz'). MSEB turns each slider into a perceived character, with antonyms at both ends (e.g. Cool — Warm). Push one way and the sound moves that direction — no Hz math needed.

The 13 sliders at a glance

#	Slider	Controls	Ends
1	Temperature	Mid-low — high energy ratio	Cool — Warm
2	Thickness	Vocal/instrument fundamental body	Thin — Thick
3	Vocal	Vocal imaging front/back	Distant — Forward
4	Sub-bass	Sub-bass depth and impact	Lean — Deep
5	Bass Texture	Bass elasticity and tightness	Loose — Tight
6	Sibilance	Overall sibilance brightness	Smooth — Bright
7	Sibilance LF	Snipe ~6kHz harshness	0 — cut
8	Sibilance HF	Snipe ~9kHz piercing	0 — cut
9	Female Overtones	Female vocal sweetness/lushness	Soft — Sweet
10	Air	Ultra-high clarity & resolution	Dark — Airy
11	Transient	Transient speed & sharpness	(slow) — Fast
12	Soundstage	Stereo width (M/S side)	Narrow — Wide
13	Imaging	Center focus / vocal place (M/S mid)	Diffuse — Focused

KEY SLIDERS

Three sliders you'll use most

Temperature
Mid-low — high energy ratio
Harsh/thin -> left (Cool); muffled -> right (Warm).

Thickness
Fundamental band body
Thin/hollow vocals -> right (Thick) for a fuller sound.

Vocal
Front/back position
Want clearer lyrics -> right (Forward), push voice up front.

Cheat card

Harsh 's'
Sibilance left + LF/HF notch

Muddy bass
Bass Texture right (Tight)

Want air
Air right (Airy)

Tip: long-press the small text under a slider to see its official one-line description.

Advanced modules

A set of pro effects beyond the sliders — turn on what you need.

Dynamic Compressor
Flattens dynamics — steady on subway / in car

Loudness Compensation
Auto bass/treble boost at low volume (ISO 226)

Crossfeed
Reduces 'in-head' fatigue (headphones only)

Space Reverb
Procedural room tail — orchestral / live hall

Dynamic EQ
Per-band compression; restores Bluetooth HF

Multi-band Limiter
Limits low/mid/high independently; no clipping

AutoEQ Correction
Blend your tuning with full AutoEQ curve

DTS Surround
Surround / Height — prefer LDAC / LHDC

Device Auto-Calibration
Applies matching AutoEQ for current device

Presets, and your own names

Original Bit-Perfect (A)

Disables all effects and plays the raw master — for pure, unaltered sound.

Reset to flat

Zeroes every slider at once. Messed up? One tap to recover.

Save Preset

Save the current setup as a preset — up to 12 custom presets.

You can name a preset (e.g. 'Commute'). The play screen then shows that name instead of a long feature list.

Example: one 'Commute' + one 'Vocals' + one 'Live' — switch by scene instantly.

Copy-paste by scenario

Scenario	How to tune
Commute / subway (BT SBC)	Slight Dynamic EQ (restore HF) + Multi-band Limiter + mid Loudness
Wired HiFi / DAC exclusi ve	Keep only the limiter; full correction on (transport is t ransparent)
Late-night low volume	Loudness on, mid-high intensity; Temperature slightly war m
Old track with harsh 's'	Sibilance left + Sibilance LF / HF notch
Vocals / podcasts	Vocal right (forward) + Thickness slightly thick + Imagin g focused
Live / orchestral	Space Reverb on, Soundstage slightly wide
Games / movies	DTS Surround on, Height up

Troubleshooting & tips

Some outputs don't support MSEB

Shows 'Not available on this output' — normal; switch to a supported source.

Bluetooth SBC cuts above 16k

Dynamic EQ restores transients + limiter guards the floor; use LDAC/LHDC for full DTS.

Messy tuning

Tap Reset to flat to zero everything and start over.

Want pure original

Switch to Original Bit-Perfect (A) to hear the raw master.
